

BOT

IN ONE EVENING?

Yes, a prototype. Here is the route.

Swipe: brief → code → test → deploy

FROM BRIEF TO BOT

01 / MODEL

WHO TALKS TO WHOM?

Four pieces. Claude writes just one.

If the code stops, the conversation stops.

Takeaway: map the system before generating.

SKILL: SYSTEM

02 / FLOW

DON'T ASK FOR AN "AI BOT".

Example: a consultation lead.

Every step needs an expected response.

SKILL: CONVERSATION DESIGN

03 / ACCESS

TOKEN = THE KEY TO YOUR BOT

@BotFather → /newbot → token

IN SOURCE: NO

IN SECRETS: YES

Keep the token out of public chats and GitHub.

SKILL: SECURITY

04 / PROMPT

ASK FOR A WORKING PROJECT.

Six requirements that prevent rework:

01 **GOAL / capture leads**

02 **FLOW / start → contact**

03 **EDGE CASES / empty, cancel**

04 **SECRETS / from environment**

05 **RUN / step-by-step commands**

06 **TEST / five scenarios**

Full prompt in the pack. This is its structure.

SKILL: WRITING THE BRIEF

05 / FILES

WHAT CLAUDE MUST DELIVER

Not a code snippet. A runnable package.

BOT / PROJECT

● bot.py	conversation logic
● requirements.txt	dependencies
● .env.example	secret placeholders
● .gitignore	secret protection

No run instructions? The project is incomplete.

SKILL: ASSEMBLY

06 / TEST

“IT WORKS” NEEDS PROOF

Walk the user flow. Then try to break it.

INPUT	EXPECTED RESULT
/start	first step appears
blank	bot asks again
/cancel	flow stops
lead	admin receives it

A failed test? Send the exact failure back to Claude.

SKILL: TESTING

07 / PRODUCTION

YOUR LAPTOP ISN'T A SERVER

Test locally. Host it for 24/7 availability.

Prototype: polling. Then monitor the process.

SKILL: DEPLOYMENT

WRAP / PRACTICE

ONE BOT. ONE OUTCOME.

Build a lead-capture prototype. Keep it focused.

YOUR ASSIGNMENT

- Map four conversation steps
- Run it locally
- Pass four checks

PROMPT IN THE PACK →

Save it. Build it. Share the result. @AlovLab
